

## CE Marking For Empty Enclosures;

The CE Mark is a European Union (EU) compliance symbol and acronym for Conformité Européenne. The CE Mark indicates that a product complies with all European directives and essential harmonized standards for health, safety, environment, and consumer protection that may apply to that product. In addition, the CE Mark promotes free trade movement from outside and within the EU. For industrial control equipment, the CE Mark is not intended to be applied to empty enclosures because such enclosures are inactive components of a final assembly. The responsibility of ensuring compliance with all applicable EU directives and harmonized standards belongs with the final equipment manufacturer.

Eaton RE Series, REC Series and DRS Series enclosures are designed in compliance with European standards and are eligible to receive a Manufacturer's Declaration of Conformity. The certificate assists the final equipment manufacturer in obtaining the CE Mark. Contact our Engineering department for further information on +44 (0)1278 772600. Eaton enclosures meet the requirements of the applicable DIN, EIA and IEC European standards. In addition they comply with REACH, WEEE and RoHS directives.
