## Energise your data centre, maximise your investment

Converged Infrastructure provides users with the pre-integrated "building blocks" from which they can construct flexible, scalable and efficient data centres. Eaton's solutions are designed and validated to integrate seamlessly with the compute, network, storage and virtualisation platforms that go to make up conventional Converged Infrastructure. Our hardware containment and integrated power management platforms are designed to minimise capital outlay and operating costs whilst maintaining system resilience, keeping your business live 365.
